Special topics: MATH 600 (3 credits)
Number Sense, Computational Fluency and Assessment in the Elementary Grades
Summer 2014
Professional Development Outreach Course
Center for Outreach in Mathematics Professional Learning and Educational Technology

Course Organizers and Instructors:
Dr. Padmanabhan Seshaiyer pseshaiy@gmu.edu
Dr. Jennifer Suh jsuh4@gmu.edu
Susan Call SCall@fcps.edu
Patty Freeman pfreema1@masonlive.gmu.edu

I. Course Description: Assessing through Problem-based Tasks and Unpacking the Mathematical Learning Progressions in K-6
This course focuses on mathematical inquiry through understanding how students learning progresses in the domains of Numbers, Rational Numbers, Functions and Algebra, Data Analysis & Probability, Measurement and Geometry.

Class Meetings: The meeting dates are as follows:
- Summer Days/Times: July 28-Aug 1, 2014 (Monday – Friday) 8:30-3:30pm
  LOCATION: GMU Prince William Campus, 10900 University Blvd., Manassas, VA
- Face-to-face meeting: September 27, 2014 Location: TBD
- follow-up webinar meeting Date: TBD

II. Student Outcomes
At the conclusion of this course, students should be able to:
A. Promote a better understanding of the nature of mathematics, learning progressions and mathematical inquiry
B. Demonstrate problem-solving strategies in various mathematical content areas and methods for cultivating problems solving, reasoning and communicating skills
C. Foster an understanding of how children’s mathematical thinking develops
D. Articulate methodologies for teaching mathematics more effectively to children with various abilities in Grades K-8; Plan effective mathematics instruction for students from diverse populations with a variety of learning needs

III. Nature of Course Delivery
The delivery of this course combines methods of seminar, online sessions, active learning, discussion, independent work, student presentation, mathematical problem solving, and writing. The course is designed both in structure and process to engage students in dialogue at the individual, group, and collective levels. Different formats will be used to help build both the capacity of the learning community. Readings and lectures will precede and focus class on-line discussions and interactive forums. This course relies on your willingness to participate in all class and team discussions. You will be asked to complete reading assignments and offer key ideas on how the readings inform professional experience. The syllabus lays out an initial plan for our work and may be revised during the course to meet students’ needs and interests. Students are expected to be independent thinkers, intellectually curious, and responsibly to each other for the quality of classroom learning. This calls for both purposeful collaborative work as well as deep individual reflection. The course is designed to enhance both of these skill sets. You should expect to spend time in between classes to reading/viewing/listening to assigned materials, conducting research and completing assignments, completing reflections, problem solving and simulations, and participating in substantive on-line discussions.

IV. Readings: Reading packet & Resources on Class Blackboard site

V. Course Requirements and Assignments

The assignments across the semester are intended to improve your strategies as a mathematics teacher and to develop your skills in the interpretation, critique and synthesis of mathematics education research. All assignments are to be completed on time so that class members might benefit from the expertise and contributions of their colleagues.

A. Participation, Postings and Reflections (30%)

Class Participation: Class seminars will consist of a discussion of the readings and related problems. Readings are to be completed before each class seminars. Students are expected to analyze and reflect on the readings and come to class prepared to participate in the discussion.

Posting and Reflections: Participants will write reflections in order to process mathematical ideas, mathematical learning progressions, and pedagogy that are discussed in the seminars and highlighted in the readings.

B. Cognitively Demanding Task Group Presentation (40%)

In this course we will study the teaching and learning of ideas related to Numbers and Computation in elementary mathematics and how to encourage a productive disposition in both our students and ourselves. As a summative evaluation of the pedagogical aspects of this course, your group will develop or select a task which fosters learning these concepts, teach and document the task, and give a short (15-minute) presentation to the class on it. The lesson draft checkpoint includes items a-b below. The final lesson paper your group submits must include all of the following components:

a) Select or develop a cognitively demanding task intended for use with the students you teach, which encourages student development of rational number and proportional
reasoning. You may use or adapt a problem from class materials, but be sure it is appropriate for the target audience. Specify prerequisite knowledge. Solve the problem, then as a group compile a collection of possible solution strategies.

b) Write a paragraph explaining what essential Numbers and Computation understanding is addressed in this problem and your specific learning goal for the lesson. Include a summary of the problem solving strategies you anticipate seeing in the classroom as you teach this lesson. Identify which strategies you will select for use in your classroom.

Present the strategies in the sequence that your group has determined including the sequence rationale. And lastly, explain how the strategies connect to one another, to prior knowledge or to future learning.

c) Write a lesson plan using the provided template that uses the problem/activity as a significant problem-solving opportunity for your students. Your group may all use the same lesson plan and include an appendix to specify any class/grade specific changes. Each member of the group will teach the lesson to his/her students and write a one-page reflection on how the lesson went, including what strategies students used to approach the problem, what ideas were raised in its discussion, and to what extent your students' understanding of the underlying Numbers and Computation in elementary mathematics concepts or ability to apply them changed as a result of the lesson. Be specific. Synthesize the individual reflections into a single reflection that will include what went as planned, what was surprising and what changes would be made to the original lesson.

*Each teacher will teach the lesson in their respective classrooms, capturing a vignette of the lesson. They will upload on http://www.edthena.com/ for peer coaching.

d) Create a one-page handout (you may use front and back if necessary, but it must fit on one sheet) summarizing your lesson for the class. Include the problem, grade level(s), mathematical topics addressed, and anything your colleagues would need to know in order to use the lesson, including (briefly) any difficulties the students tended to encounter. The handout should not be the same as your lesson plan (just select details!), and will be turned in with the main paper. On the day of your group’s presentation bring a copy for each class member.

C. Student Work Analysis (20%)

During the course as we will read and discuss student thinking and pedagogical strategies found in the classroom related to proportional reasoning. For this assignment, you are to write a short (roughly 3-5 page) case study describing a mathematical discussion involving one or more students, as they tackle a Numbers and Computation problem. A case is neither a complete transcript of a lesson nor as prefabricated as an interview, although it is very helpful to include direct quotes and dialogue from students. You must base your case on a conversation for which you were present, and preferably in which you were involved, but it could come out of a lesson you observed, or a conversation among two or more students. You may choose to narrow in on one or two students, or on one small group, or you may describe a whole-class conversation. The most important thing is that the episode illustrates some aspect of children's mathematical thinking about number sense in elementary
mathematics and centers on a mathematical topic involving children’s thinking about Numbers and Computation in elementary mathematics. 

In writing your case study, begin by describing briefly the class's larger context (including grade level) and the mathematical topic; then describe the relevant parts of the conversation in as much detail as you can manage. Include what you are thinking as you work with the students. Finish up by summarizing your evaluation of the students involved and saying what issues and questions you still have after this conversation. Include an analysis of the students' thinking, and questions the case raises for you. It is important that your reflection address teaching issues beyond the one topic and set of students involved. This will document your ability as a reflective practitioner to make connections that inform your teaching practice more broadly.

D. Final Content Exam (10%)
Participants will take comprehensive exam covering the content studied in the course. The main focus of the exam will be on the mathematical content of the course. Students will be expected to demonstrate their own understanding and reasoning of the content as well as the knowledge and understanding needed by K-5 students in order to make sense of this content.

THE COLLABORATE LESSON ANALYSIS PROECESS

Collaborative Planning Activity
This assignment will take place during the face to face sessions. Small groups will select a lesson from the Navigations series. Groups will meet throughout the course to plan for the implementation of the lesson. Groups are required to participate in all discussions including face-to-face, synchronous online, and asynchronous online.

Lesson Implementation
Each participant will video record while he/she implements the lesson. After analyzing and reflecting on the video, participants will select a portion of the video to share with their collaborative group.

Written Reflections
Participants are required to reflect on the teaching experience. These reflections will be written and submitted to the course instructors only. (See B. above).

VI. Evaluation Schema

Determination of the Final Grade:
Graduate Grading Scale

<table>
<thead>
<tr>
<th>Grade</th>
<th>Percentage Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>93%-100%</td>
</tr>
<tr>
<td>A-</td>
<td>90%-92%</td>
</tr>
<tr>
<td>B</td>
<td>87%-89%</td>
</tr>
<tr>
<td>B</td>
<td>80%-86%</td>
</tr>
<tr>
<td>C</td>
<td>70%-79%</td>
</tr>
<tr>
<td>F</td>
<td>Below 70%</td>
</tr>
</tbody>
</table>

VII. UNIVERSITY POLICIES
The university has a policy that requests students to turn off pagers and cell phones before class begins.

Model Eliciting Tasks: http://crlt.indiana.edu/research/csk.html

HONOR CODE
To promote a stronger sense of mutual responsibility, respect, trust, and fairness among all members of George Mason University and with the desire for greater academic and personal achievement, George Mason University has set forth a code of honor that includes policies on cheating and attempted cheating, plagiarism, lying and stealing. Detailed information on these policies is available in the GMU Student Handbook, the University Catalog, and on the GMU website (www.gmu.edu).

Individuals with Disabilities Policy
The university is committed to complying with the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 by providing reasonable accommodations for applicants for admission, students, applicants for employment, employees, and visitors who are disabled. Applicants for admission and students requiring specific accommodations for a disability should contact the Disability Resource Center at 703-993-2474, or the University Equity Office at 703-993-8730.

ATTENDANCE POLICY
Students are expected to attend the class periods of the courses for which they register. Although absence alone is not a reason for lowering a grade, students are not relieved of the obligation to fulfill course assignments, including those that can only be fulfilled in class. Students who fail to participate (because of absences) in a course in which participation is a factor in evaluation, or students who miss an exam
without an excuse, may be penalized according to the weighted value of the missed work as stated in the course syllabus (GMU University Catalog, pg. 32).

TASKSTREAM REQUIREMENTS
Every student registered for any MEL course with a required performance-based assessment (will be designated as such in the syllabus) is required to submit this assessment (Professional Development Grant Proposal) to TaskStream (regardless of whether a course is an elective, a onetime course or part of an undergraduate minor). Evaluation of your performance-based assessment will also be provided using TaskStream. Failure to submit the assessment to TaskStream will result in a the course instructor reporting the course grade as Incomplete(IN). Unless this grade is changed upon completion of the required TaskStream submission, the IN will convert to an F nine weeks into the following semester.

GMU POLICIES AND RESOURCES FOR STUDENTS
a. Students must adhere to the guidelines of the George Mason University Honor Code [See http://oai.gmu.edu/honor-code/].

b. Students must follow the university policy for Responsible Use of Computing [See http://universitypolicy.gmu.edu/1301gen.html].

c. Students are responsible for the content of university communications sent to their George Mason University email account and are required to activate their account and check it regularly. All communication from the university, college, school, and program will be sent to students solely through their Mason email account.

d. The George Mason University Counseling and Psychological Services (CAPS) staff consists of professional counseling and clinical psychologists, social workers, and counselors who offer a wide range of services (e.g., individual and group counseling, workshops and outreach programs) to enhance students’ personal experience and academic performance [See http://caps.gmu.edu/].

e. Students with disabilities who seek accommodations in a course must be registered with the George Mason University Office of Disability Services (ODS) and inform their instructor, in writing, at the beginning of the semester [See http://ods.gmu.edu/].

f. Students must follow the university policy stating that all sound emitting devices shall be turned off during class unless otherwise authorized by the instructor.

g. The George Mason University Writing Center staff provides a variety of resources and services (e.g., tutoring, workshops, writing guides, handbooks) intended to support students as they work to construct and share knowledge through writing [See http://writingcenter.gmu.edu/].

PROFESSIONAL DISPOSITIONS
Students are expected to exhibit professional behaviors and dispositions at all times.

CORE VALUES COMMITMENT
The College of Education & Human Development is committed to collaboration, ethical leadership, innovation, research-based practice, and social justice. Students are expected to adhere to these principles. http://cehd.gmu.edu/values/

For additional information on the College of Education and Human Development, Graduate School of Education, please visit our website [See http://gse.gmu.edu/].
